

# Starfighter™ L

**Controls:**

A variety of annual broadleaf weeds and annual grassy weeds, including crabgrass, goosegrass, field sandbur, annual sedge, annual bluegrass, Virginia buttonweed, pigweed, Florida pusley, oxalis, stinging nettle and carpetgrass

**Control Weeds Sooner, Longer And Better With Pre-emergent Starfighter L.**

Starfighter™ L pre-emergent herbicide uses the proven ingredient oxadiazon to give you superior control of a variety of common annual broadleaf weeds and grasses. In addition to delivering effective control of early weed flushes, Starfighter L provides long-lasting, residual control—even in areas that may need to be sprigged or where turfgrass roots are already weakened due to pest, mechanical or

other damage. You can confidently use Starfighter L on established perennial turf such as bluegrass, bentgrass, bermudagrass, perennial ryegrass, seashore paspalum, tall fescue and zoysiagrass, as well as in commercial nurseries and landscapes. Starfighter L controls such key grass and weed problems as crabgrass, goosegrass, annual sedge, pigweed, Florida pusley and many others.

Features	Benefits
Extended length of control	Because one application provides weed control for up to six months, you reduce the need for multiple applications, which saves you time and money
Unique mode of action	Controls weeds through the shoots, not the roots. It doesn't harm turf and ornamental roots, and it's effective against DNA-resistant goosegrass
Dual modes of control	By working through the shoots, Starfighter L controls existing weeds while also delivering pre-emergent control to prevent other new weeds
Compatible with other Herbicides	You can conveniently gain a broader spectrum of weed control, especially in hard-to-maintain areas, such as around fence posts and trees
Non-staining formulation	Have peace of mind when you apply Starfighter L near buildings, fences, sidewalks, driveways, landscape features, etc. with no worry about stains

**Directions For Use:**

Read the entire label before using Starfighter L. Using a rate of 1.85–2.8 fluid ounces in .75–3.5 gallons of water per 1,000 square feet, apply Starfighter L in late winter or early spring—before weed seed germination and greenup of the turf have begun. The rate depends on specific weeds being targeted. To ensure optimal pre-emergent control, especially on crabgrass and goosegrass, the earlier you apply Starfighter L, the better. Its performance is not significantly affected by temperature, so Starfighter L won't lose effectiveness when applied early. Thoroughly water treated areas soon after application, but do not incorporate the herbicide into the soil. Starfighter L works best when the soil surface is not disturbed.

**Field Support:**

Phoenix Environmental Care maintains a wide network of local distributors who provide high levels of product and technical support. For added convenience, simply direct any questions about Starfighter L to 1-888-240-8856 for prompt attention.
